

ON THE BOUNDARY OF THE UNIVERSE

The boundary of the universe is a complex and multi-faceted concept. It is not a simple line or surface, but a dynamic and evolving structure. The boundary is defined by the distribution of matter and energy, and it is constantly changing as the universe expands and contracts. The boundary is also defined by the laws of physics, which govern the behavior of matter and energy. The boundary is a complex and multi-faceted structure, and it is constantly changing as the universe evolves.
